

To include a yellow note into a document insert the code:

```
\yellownote{
  Message into a yellow note. We just want to see how it
  will look.
}
```

and you will see the first yellow note at the margin of the page. Include more text then...

This text is only a test. This text is only a test. This text is only a test. This  
text is only a test. This text is only a test. This text is only a test. This text  
is only a test. This text is only a test. This text is only a test. This text is  
only a test. This text is only a test. This text is only a test. This text is  
only a test. This text is only a test. This text is only a test. This text is  
only a test.

And when necessary, change the size of the yellow note with the following command:

```
\resizeableyellownote{2.5}{1.5}{
  Resizeable yellow note.
}
```

[illegible]

I hope this help you improve your design.
